

## PRESS RELEASE

**Wooden warmth from Finland.** Secto Design is a Finnish company specialized in designer lighting fixtures hand-crafted of wood. The entire lighting collection, designed by the awarded architect Seppo Koho, shares the same timeless design and architectonic clarity. The fixtures are made of flawless Finnish birch by highly-skilled local artisans.

**More than light.** The warm light reflecting from the Finnish birch wood emphasizes space and creates an inviting environment bringing in the harmony of the birch groves. The design of the lights is both classic and contemporary, and the forms of the shades are simple yet interesting. The lighting fixtures are famous for their quality, functionality, timelessness and suitability for a variety of different styles. With their clear but interesting architectonic forms Secto Design lamps are spaces in themselves.

**Modern classics suspended in a new way.** Secto Design is proud to present a new suspension solution at IIDEXCanada: Varsi 1000. The adjustable suspension arm enables the use of the already classic Secto Design pendants in an exquisite and innovative way, regardless of the ceiling structure. The length of the rotating arm is adjustable from 130 cm up to 230 cm and the hanging height of the pendant can also be modified. The powder painted steel arm is available in black and white.
