

Goniophotometric Test Report

TEST ARTEFACT

The measurement device (DUT) was LED light. The burning position of the DUT was not changed during the measurements.
Customer: Secto design Oy

MEASUREMENT METHOD

The test method is with accordance of LM-79-08 / CIE S025 test standards. The measurements were made by a goniospectrophotometer SSL C-1R.1600.4A at the dark room of SSL Resource Ltd.

The spectral radiant intensities of a light source at different directions were measured with a calibrated spectrometer located at a known distance from the light source.

MEASUREMENT UNCERTAINTY

The photometer (SSL L-200, sn L200-004, Measuring head LH200-003) used in goniophotometer is traceable to national standard of illuminance responsivity at PTB (Certificate of calibration CR 0054 signed on 6 March 2019). The power meter and supply of type TDK Lambda is traceable national standard of electrical parameters at NIST (Calibration date 5 February 2018). The expanded uncertainties of the luminous flux and efficacy are $\pm 3.8\%$ and $\pm 4.0\%$ ($k = 2$), respectively.

MEASUREMENTS

Table below describes the measurement conditions. The luminaire under test and photometer/spectrometer were mounted onto the same optical axis and perpendicular by an alignment laser. The measurement distance from the rotation axis to the photometer optical receiving surface was measured by laser distance meter.

Table - Measurement information

Ambient temperature of the laboratory	25.0 degC
Power supply	230.0 Vac
Measurement distance	8748 mm
Location of the rotation axis (behind the outermost surface of the optics)	55 mm
Angular step, C plane	15.0 deg
Angular step, gamma angle	2.5 deg
Maximum gamma angle	180.0 deg
Stabilization time	45 min

Table. Luminous intensity data (cd) at measured C planes (rows) and gamma angles (columns)
